FRQI color rotation, next-neighbor blocks, depth (2,1), 5 qubits
81 gates, 28 two-qubit gates, depth 42, two-qubit depth 21. q0 = color qubit (target of every CRY), q1-q4 = address qubits. Measured in order q1 q2 q3 q4 q0. RX = noise input, RY and CRY = trained weights.
Used in: test_qiskit_export (exact + 20k-shot Aer), training checks (exact, 256, 2048 shots), compiled-step check.
