FRQI color rotation, SO(4) blocks, depth (2,1), 5 qubits
57 gates, 20 two-qubit gates, depth 26, two-qubit depth 13. q0 = color qubit (target of every CRY), q1-q4 = address qubits. Measured in order q1 q2 q3 q4 q0. RX = noise input, RY and CRY = trained weights.
Used in: test_qiskit_export.
